MODIFICATION OF THE ROCKY FLATS SURFACE WATER AND SEDIMENT MONITORING PROGRAMS - JEE-0392-92

Pursuant to your request (2105) EG&G Environment Management Department (EM), Surface Water Division (SWD) implemented changes to the Rocky Flats Plant surface water and sediment monitoring programs that EM proposed in the "Evaluation of the Rocky Flats Surface Water and Sediment Monitoring Programs" (Evaluation). In addition to the monitoring program modifications, EM is committed to producing the following deliverables.

- (1) An interpretive report/assessment of the Building Sump and Footing Drain monitoring program.
- (2)An interpretive report/assessment of the 750 Pad and 904 Pad runoff water quality.
- (3)A summary document that describes the entire surface water sampling program. The summary shall include the elements that DOE/RFO requested in the referenced correspondence.

EM will coordinate surface water and sediment monitoring program modifications with Operable Unit Investigation activities to ensure that adequate data are collected for both environmental protection and environmental restoration objectives. Reduction of the scope of the site-wide program will not impact NPDES/FFCA compliance sampling, operational monitoring, and monthly reporting.

The gaging station network proposed for long-term, maintenance monitoring of RFP water quality has been in full operation since the spring of 1991. EM anticipates installation of permanent gaging stations, to upgrade the current temporary gaging stations, by the end of first quarter, fiscal year 1993. The temporary stations are fully functional and collecting data, some of which has been transmitted to your staff.
